

MOUNTAINCAT 28

Hydrofoil supported. Offshore capable. Engineered to perform.

MOUNTAINCAT 28

PURPOSEFUL. CAPABLE. DISTINCTIVE.

The Mountaincat 28 is a compact hydrofoil-supported centre-console catamaran created around a clean profile, a highly usable deck and confident offshore capability.

Its protected helm, generous hardtop, practical seating and uncluttered circulation make it equally suited to fishing, coastal cruising and active family boating.

Twin-outboard propulsion and the inherent stability of the catamaran platform complete a versatile package with a distinctly premium feel.

HYDROFOIL SUPPORTED. BUILT TO PERFORM.

Hydrofoil assistance works with the twin-hull platform to add lift as speed increases.

At the heart of the Mountaincat 28 is its hydrofoil-supported catamaran hull. The hydrofoil works in combination with the twin hulls to generate additional hydrodynamic lift as speed increases, reducing the amount of hull surface running through the water.

This can reduce resistance and improve efficiency while delivering a smoother, more controlled ride. The result is a boat designed to combine the inherent stability and deck space of a catamaran with the performance advantages of hydrofoil assistance - particularly when operating at cruising speeds and in offshore conditions.

ADDITIONAL LIFT

Hydrofoil assistance generates lift as speed builds, helping support the hull through the water.

REDUCED WETTED AREA

Less hull surface in the water can reduce hydrodynamic resistance at operating speed.

CATAMARAN STABILITY

Twin hulls provide a wide, stable platform with generous usable deck space.

A STRONG, CLEAN PROFILE

Long, purposeful lines and a protected helm give the Mountaincat 28 a confident presence from every angle.

HYDROFOIL-SUPPORTED FORM

A catamaran platform developed around stability, usable volume and hydrofoil-assisted performance.

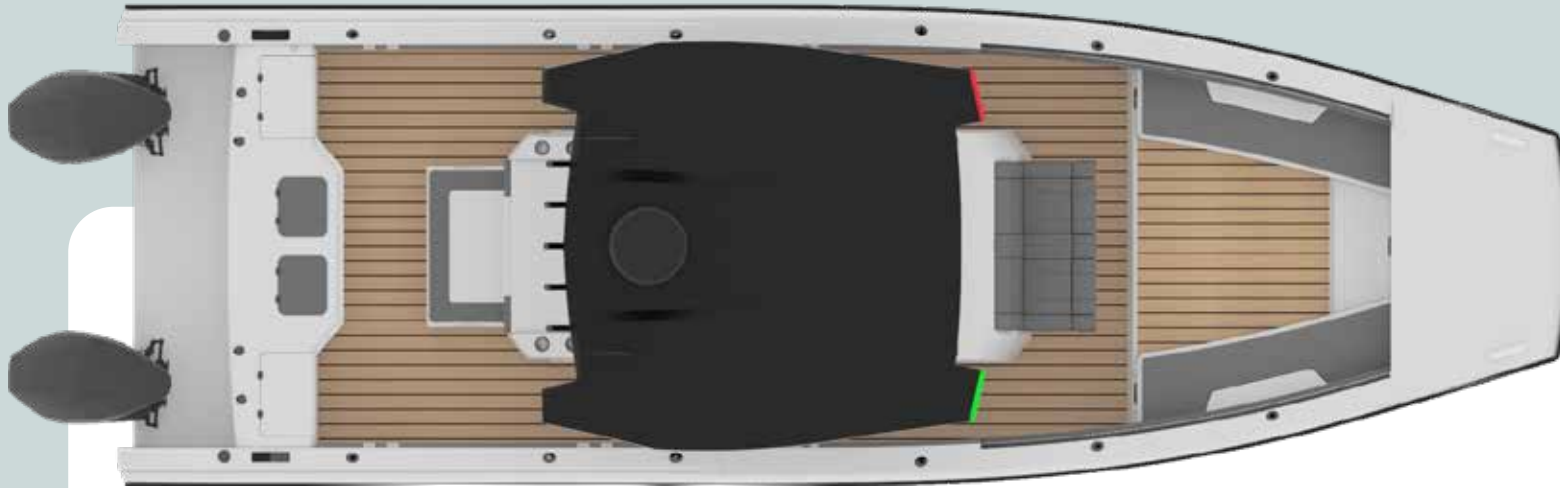

PROTECTED HELM

Integrated forward windscreen and hardtop architecture add shelter while preserving visibility.

TWIN OUTBOARD LAYOUT

A clean twin-engine transom arrangement supports practical access and modern propulsion options.

DESIGNED AROUND THE DECK

The top view reveals the core of the Mountaincat28: open circulation, clear working zones and useful separation between the aft cockpit, helm and forward seating area.

AFT COCKPIT

Open space around the transom with integrated modules and direct access to the working deck.

CENTRAL HELM

A commanding driving position beneath the oversized hardtop, with room for modern navigation and control systems.

FORWARD ZONE

A generous bow area with integrated seating and an uncluttered deck for versatile use.

WALK-AROUND ACCESS

Wide side passages keep movement around the boat simple and intuitive.

FUNCTION MEETS COMFORT

A versatile arrangement for long days on the water, with the hardtop, helm, seating and deck areas working together as one integrated platform.

HARDTOP PROTECTION

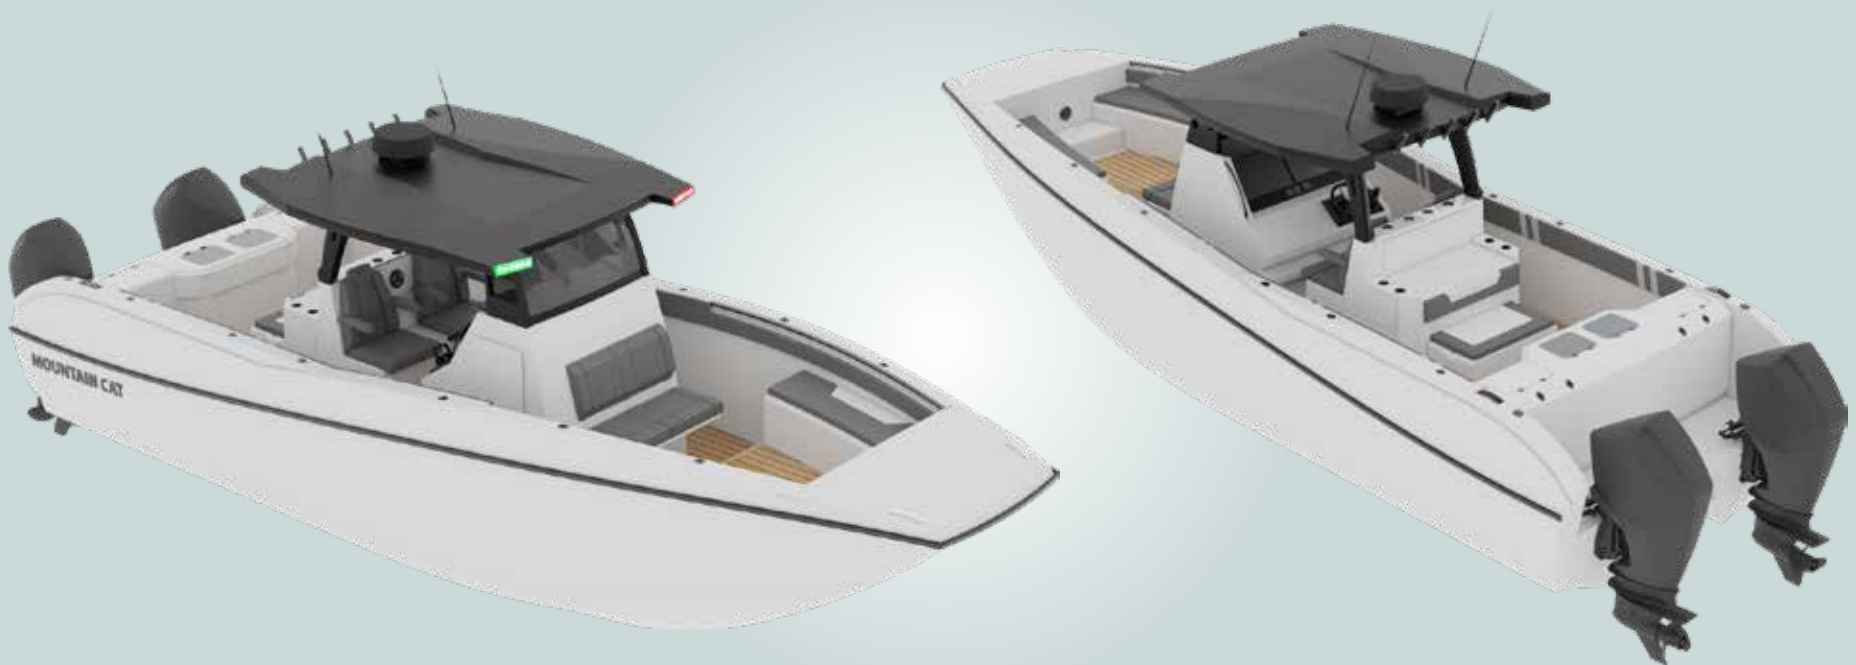

Broad overhead coverage with integrated electronics and radar mounting area.

PRACTICAL HELM

A focused console arrangement designed for clear sightlines and easy control access.

FLEXIBLE DECK USE

Open areas can support cruising, fishing and general recreational configurations.

TECHNICAL SPECIFICATIONS

MOUNTAINCAT 28 - HYDROFOIL SUPPORTED CATAMARAN

LENGTH

28 ft

DRY WEIGHT

2800 kg
